

Appendices

- Appendices (if any) follow the reference pages, and are headed and numbered the same as the rest of the paper. For example, if the last reference page is headed "HOW TO PREPARE 20", the first appendix page is "HOW TO PREPARE 21".
- An appendix should contain material that is too detailed to be presented in the body of the paper, but which may be needed to help another person replicate your study. Examples of appendices are grant budgets, supply lists, survey questionnaires, psychological instruments, biochemical assays (not published elsewhere), or computer programs specifically developed for your project.
- Each appendix should start on a new page.
- Appendixes are labeled in the order they were referred to in the body of the paper, with the first appendix being Appendix A. If you only have one appendix, call it Appendix, and don't add a label.
- The word appendix and the identifying letter are centered on the top line of the page.
- The title of the appendix is centered on the next double-spaced line
- The text of the appendix begins at the left margin, is double-spaced, and second and subsequent paragraphs are indented, just like the text of the paper.
- Tables are labeled A1, A2, or B1, B2 in order of appearance on the appendix page.
- If figures are included in the appendix, they are numbered Figure A1, and so forth.
- Do not continue with the figure and table numbers from the text of the paper. Appendices are treated as separate from the main text.
